- 5. (Previously Presented) A memory apparatus according to claim 1, characterized in that the second storage region is used as a region for storing a use history of the memory apparatus.
- 6. (Original) A memory apparatus according to claim 1, characterized in that the second storage region is used as a region for storing a quality history of the memory apparatus.
- 7. (Original) A memory apparatus according to claim 1, characterized by further comprising a read-only storage region storing address data of the second storage region.
- 8. (Currently Amended) A data-processing apparatus comprising data processing means for writing data into, and reading data from, [[an]] a memory apparatus comprising a first storage region from which data can be read and into which data can be written, in accordance with instructions made by a user, [[and]] a second storage region from which data can be read and into which data can be written by said data-processing apparatus, said second storage region having a user-use prohibition table which is normally inaccessible to said user and which has a plurality of addresses of data items in which one address designates one or more defective locations in said memory apparatus, and a conversion table which includes logic addresses which are assigned only to blocks in said first storage region and are not assigned to (i) defeative blocks and (ii) non defeative blocks in said second storage region and are not assigned to (i)

defective blocks and (ii) non-defective blocks in said second storage region: 7
